FOUNDATION FOR ENVIRONMENT CLIMATE AND TECHNOLOGY

Researcher / Data Analyst

A person who is genuinely interested in a career in research in climate, environment, and quantitative analysis is sought for a non-profit scientific, engineering, and socio-economic research organization. The candidate should be a recently qualified graduate in physical sciences, engineering or information technology who is able to undertake climate and environmental diagnostics, modeling, and develop prediction. The researcher will carry out data analysis and modeling; oversee aspects of projects and undertake some field work.

The candidate must have:
- ✓ mathematical, statistical and scientific programming skills well beyond A/L
- ✓ Deep understanding of the laws of nature
- ✓ Demonstrated aptitude for research,
- ✓ motivation to work independently, and willingness to learn new subjects
- ✓ English Skills to write up results in reports / scientific papers / books
- ✓ The ability to work cooperatively in a multidisciplinary team environment
- ✓ Long-term goals for scientific, environmental and technological research

Appointment is on contract basis and extendable. To apply, send a resume and names of two professional referees by email at earliest. Review shall begin on the deadline announced at www.climate.lk/vacancies.html and continue till the position is filled.
